

## 1814-1816 Septic Tank Location

The septic tank openings (as indicated by the blue dots) for 1814-1816 are located 39' east of the edge of deck of 1814. They are also located 31' north of the edge of the major rock in the island to the south. The orienting line for the openings is from the south-most window in the four window configuration on the deck of 1814. (See photos below.) The openings are currently 3'6" below ground. During the pumping/inspection done in October of 2020, risers will be installed over the openings so that the access to the openings will be at ground level in the future.
