

1819-1821 S. Viewcrest Ln Septic Tank Location

The septic tank openings for 1819-1821 S. Viewcrest Ln are identified by the two blue dots approximately 12' and 17' east of the SE corner of the NE patio wall of 1821. If you were to draw a straight line extending eastward from the north facing wall of the 1821 patio wall, the openings are approximately 12" south of that imaginary line. The openings are between 12"-14" deep under the grass covering and the openings are 24" in diameter.

Note: There is sprinkler control wiring approximately 1.5-2' to the north of the primary tank opening. The shovel in the second photo below is where the sprinkler electrical wire is located. Dig Carefully.
